

VisNet® Design

Designing Low Voltage Networks for a Better Future

VisNet® Design

Helping Distribution Network Service Providers and connection providers to design and model existing network connections and new requests

V2 AUS 30.05.2024

PUBLIC

www.eatechnology.com/australia

VisNet® Design is an online software tool which helps connection providers and network operators to design and model existing network connections and new requests.

These connections can range from a simple service connection for a new property to an entire network built out from a substation. The tool also features various models for low carbon technologies, including EV charge points, solar photovoltaics, and heat pumps.

Why Use VisNet® Design?

- Easy to use web application that works on a wide variety of devices
- Centralised file management to access saved models
- Network schematic and assessment results shown together on a map view
- Comprehensive report for network design summary and assessment results
- Auto-calculated cable lengths from GIS co-ordinates
- Calculates smallest compliant cable sizes
- Rapid assessment of complex networks
- Minimal training requirements
- Cost effective with clear, simple pricing model
- Easy deployment with automatic updates
- Enterprise system integration is available separately

How to Use VisNet® Design

Login to VisNet® Design

Enter the site location

Run the model

Position and configure the required assets

Save the results

VisNet Design gives an intuitive web-based experience to provide rapid modelling of LV networks. It is compatible with modern web browsers and is optimised for Chrome and Edge. It provides a modern, mobile-friendly, touchscreen enabled LV network design tool through a simple subscription-based licensing model.
