

Objective

- To receive a map of lightning strikes on a defined site
- To facilitate the maintenance of systems (including those for lightning protection).

Principle

This service provides a list and a map of lightning strikes on a defined site and its near vicinity. It allows you to check installations and even some sensitive or nerve centres.

There is no need for installation and maintenance of material on the site; this service is available by annual subscription.

How it works

The list of lightning strikes identified by Météorage is sent by email the day after the storm. It contains the number and characteristics of the lightning strikes in a reference zone corresponding to a circle 2 km in radius (or more as an option*) located exactly on the subscriber's site.

In his dedicated and secure space, the subscriber can also use www.meteorage.com to check his monthly or annual balance of storm activity from the date his subscription started.
